

# BANK SINKER

Bank on this sinker to lower your line to new depths, and you'll pull 'em in like chump change...in fresh or saltwater.

Hexagon sides resist rolling in currents

## BELL SINKER

Bell Sinkers are teardrop shaped to cast smoothly and resist snags on the retrieve. Designed with a molded eye, these beauties can be produced quickly and inexpensively. Now that's a common-sense solution that rings out loud and clear.

## BELL SINKER WITH BRASS EYELETS

One of the most popular sinker designs ingeniously combined with a tough and smooth brass wire eyelet. The results are a strengthened sinker, reduction of line abrasion and the ability to attach a snap or a snap swivel.

## BOTTOM BOUNCER SINKER

Bounce over obstructions that would snag most other sinkers. Our Bottom Bouncer is a modern snagless-type sinker. The slender shape of the lead body and wire extending through it permits the Bottom Bouncer to bump and bounce over obstructions. The bait and hook trail safely above and behind as the stainless steel wire springs over rocks.

Note: This lure must be molded by "ladle pouring" with SOFT LEAD ONLY!

## CRESCENT SINKER

Shaped like a crescent moon and designed as an in-line sinker, the Crescent Sinker acts as a keel to prevent rotation and line twists. Optional swivels may be added to each brass wire eye for added performance.

## EGG - SLIP SINKER

"Slip" by your fish undetected. The line will slip through the Egg or Slip sinker, so the fish will not feel the weight of the sinker when it picks up the bait. The hook settles more quickly without the sinker's resistance. Plus, the fish can't use the sinker's weight to help throw the hook when breaking water. This fish won't be the one that "got away."

Fish won't detect the Egg Sinker until it's too late

## FLAT BANK SINKER

The Flat Bank Sinker gives you an edge in thick cover and fast waters. The low profile stays the course when other sinker styles might be pushed or rolled.

## NO SNAG SINKER

No one can promise "no snags," but this design comes darn close. So thin and flat, it seems to glide through snags when retrieved so you can spend time enjoying the thrill of the catch.

## NO ROLL SINKER

The flat, low profile does not drift with the current, so your line stays in place. A CP332 Core Pin for each cavity is included. Core pins can be stripped away immediately in the mold or later after the extracted parts have cooled. Extra CP332 parts are available to increase molding speed.

## PINCH-ON SINKER

Pinch-On Sinkers are very easy to attach and remove from the line. The ears of the sinker are simply folded over the line, which gives the Pinch-On a streamlined shape when attached. It is important to use only soft lead when casting Pinch-On Sinkers to ensure that the ears will bend easily.

## PYRAMID SINKER

The Pyramid Sinker excels in strong currents with any bottom condition. The pyramid tends to bury itself if the bottom is soft. On hard bottoms, the flat sides will prevent the pyramid from rolling with the current.

Pointed base can bury itself in soft terrain

## DOWNRIGGER BALL SINKER

Precision engineered, this 2-piece mold is designed to give you a straight running ball. You will need your bench vise to stabilize the mold as well as heavier casting equipment (p. 87). If you are looking to protect your boat finish and minimize the electrofield, try coating the balls with a multi-purpose rubber coating (e.g. Plasti Dip®) which can be found at your local hardware store.

## RIVER SINKER

No need to go with the flow. These large donut-shaped sinkers hold their own against the currents in rivers, tidal flats, coastal areas and surf. The low profile and raised outer edges of the River Sinker prevent the rolling or tumbling that you'd expect under these conditions.

## SPLIT SHOT

The round Split Shot is one of this country's most used sinkers because of the ease in which it can be attached to the line. That is, it's easy once you know the secret, which is to just grip the sinker with pliers from behind the split and squeeze the two ends of the slot in toward each other. The Split Shot will spread apart and release the line without damage.

## TROLLING SINKER

Successful trolling is all about line control. Crane swivels molded in at each end of this streamlined in-line Trolling Sinker eliminate twisted or kinked lines.

# KEEL TROLLING WEIGHT

Much like a keel on a boat's hull, we've added a keel to the B-Chain trolling sinker to further increase the sinker's stability. Requires two "B-Chain" swivels per sinker.

The keel adds stability for more control

# WORM RIG SINKER

Get in where they feed! The Worm Rig Sinker is used in weed beds, where it prevents the plastic worm from snagging or tearing. This sliding sinker has a small-sized hole for use with monofilament line. Streamlined shape makes for easier retrieval.

**NOTE: Worm Rig Sinkers DO NOT have a hollow base.**

# WALKING SINKER

Outwits the Walleye's legendary fickleness. Designed and balanced to pivot to its heel and let the line slide through the eye so smoothly that a fish will feel no unnatural sinker drag when it picks up the bait. Its shape is streamlined and rock and snag resistant. It will not roll in current like rounded slip sinkers.

Walking Sinker is designed to pivot to its heel

# DROP-SHOT SINKERS

Drop-shot rigging puts the weight at the end of the line. The hook and bait are tied above. The bait can be set at a determined distance above the bottom. The #7 Do-It® Line Grip Swivel has a V-shape in the eye to grip the line without tying. Drop-shot Sinkers can easily be replaced or adjusted. Should it become snagged, the sinker pulls off the line, but the hook remains. Because of its shape, the Round Drop-shot Sinker is ideal for soft bottoms and the Finesse Drop-shot is best for rocky bottoms or areas of high vegetation.
